

Nex Gen is our first new Gel Based Bonder.

Nex Gen Application and Information, you need to know!

Application

- Apply to a prepped & cleaned nail.
- With a small amount of the gel brush into the nail plate maintaining a nice even consistency over the entire nail plate.
- The nail should appear wet and shiny. Cure 1 minute
- A dispersion layer will be evident after cure time. Not necessary to clean.
- Problem Lifters; apply one thin coat of Rock Star first and proceed with Nex Gen.
- Proceed with gel application or gel polish.

Nex Gen is a gel-based bonder that is a strong adhesion gel that increases the adhesion of gel builder to the bonder base layer.

Nex Gen works as a 2 in 1 product: as a primer and as a gel base. The bonder is acid free which increases the adhesion of the gel. A small amount of the product is applied to the nail after preparing it for the enhancement. Nex Gen requires a 1 min cure and when removing the hands from the lamp, it is not necessary to clean the nail with any product. You can move right into your application of choice.

Nex Gen can also be used within the service to adhere nail art items to your enhancement such as 3D art pieces or covering your artwork when a nice thin layer is required. For a longer sculpted nails it is recommended to use a coat of Rock Star Bonder as they are both compatible together.
